

The Implications Wheel®

Reading an Exploration

Start by assuming that **the center** happens. The circles connected to the center are possible consequences of the center. These are called **1st order implications**.

Then assume that the 1st order implications happen. The **2nd order implications** are possible implications of the 1st orders.

Finally, the **3rd order implications** are possible implications of the 2nd orders.

Scoring for Desirability

The desirability or undesirability of an implication **depends on one's point of view**. The point of view from which these implications were scored is printed in the upper-right corner of the exploration.

The desirability scale goes from -5 to +5, with two special scores (+/-50) for extraordinary situations.

Scoring for Likelihood

Each likelihood score **assumes the occurrence of the preceding implication**. The likelihood scale is from 1 to 9.

If you see a red or a blue implication that is circled, the circle indicates that the implication received a 7, 8, or 9 likelihood.
